

SLINGSHOT™ RTK BASE STATION

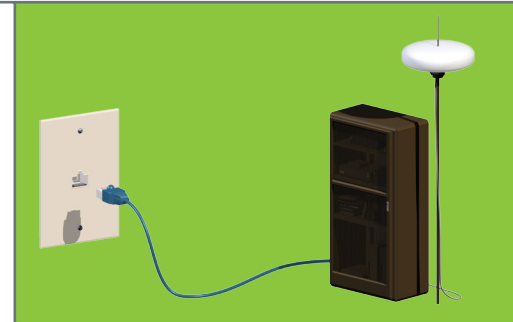

Technical Data Sheet

1.0

SLINGSHOT RTK BASE STATION > SPECIFICATIONS

With a range of at least 30 miles — with some users reporting accuracy 60 miles and beyond — a single Slingshot™ RTK Base Station will service some 2 million acres with RTK correction signals that can deliver almost surgical accuracy in the field. The base station distributes RTK signals through cell phone networks. The system is compatible with every major cell provider in North America. This approach to connectivity has considerable impact for both precision ag dealers and their customers: 1) it means an order-of-magnitude increase in the area they can serve with a single data source 2) it means customers in regions that previously didn't have access to RTK technology can now upgrade their operation to a new level of precision.

With Slingshot RTK Base Stations installed throughout Slingshot's vast network of North American dealers, users can leverage the Slingshot advantage almost anywhere you can grow crops.

Size: 15.185" x 18.313" x 3.56"

Notes

- > Delivers RTK correction signals through the Internet, distributed to end-user vehicles through wireless cell phone networks.
- > 30+ mile range from a single base station.
- > No network to build: RTK signals are distributed through existing cell phone network towers.
- > Modest-sized hardware fits in a standard server rack.
- > Connects to the Internet through standard Ethernet port.
- > Zero line-of-sight restrictions to signal delivery to user from trees, hills, buildings or other structures.
- > Designed standard with back-up power supply to eliminate down time, including 5 hours of battery backup
- > Standard two (2) year warranty, with an optional two (2) year extension for a total of four (4) years protection.
- > Simple installation, eliminates typical RTK tower infrastructure issues
- > GLONASS capable
- > Integrated Cisco router
- > Integrated wireless back-up modem
