Some agriculture manufacturers think the more products the better. Tractors, combines, row crop planters and even general consumer products like riding lawn mowers and utility vehicles. They make it all. With so many products to design, build and support, where do you suppose sprayers rank in terms of importance? We do things differently.

Founded in 1997, Equipment Technologies has been a sprayer company — and only a sprayer company — since day one. We build sprayers — that’s it. And that’s why we build the best sprayers on the planet.

APACHE IS ALL ABOUT SPRAYERS

Thousands of pounds lighter, because compaction is a killer. With mechanical drive for more Power-to-the-Ground™ and easier maintenance than hydrostatic sprayers.

Higher and faster than pull-type sprayers to get the job done in half the time. In a cab that’s quiet and smooth, because comfort matters. In a sprayer that costs up to $120,000 less and earned the Highest Retained Value Award from EquipmentWatch™ back-to-back years — because you should make green, not pay for it. The residual value of an Apache has a significant impact on lifetime ownership costs — perhaps the most influential measurement in the buying process. And we’re the only sprayer backed by a five-year warranty, because dependability is everything.

How do I run? In the best sprayer on the planet. Run with us.
**APACHE VS. CUSTOM APPLICATION**

- **Timing.** Owning your own sprayer allows you to spray when you need to spray.
- **Quality.** Doing it yourself gives you the confidence that it gets done right.
- **Cost.** In most cases, it pays to perform your own spray application.

**APACHE VS. FULL-TYPE SPRAYERS**

- **Speed.** Spray the same number of acres in half the time.
- **Comfort.** Enjoy a smoother, more comfortable ride.
- **Clearance.** Higher clearance allows you to spray later into the season.
- **Performance.** Less potential soil compaction and better fuel efficiency, all without adding hours on your tractor.
- **Resale.** Apache Sprayers retain (on average) 72 percent of its value after five years.

**APACHE VS. HYDRASTATIC SPRAYER**

- **Maintenance.** Simple mechanical drive is easier and less expensive to maintain.
- **Compaction.** Weighing 10,000 to 15,000 pounds less, Apache is lighter and reduces yield-robbing compaction.
- **Power.** Hydrostatic machines require more horsepower because of added weight from wheel motors and pumps. The Apache’s lighter construction provides more Power-to-the-Ground™ than competing sprayers. That way you get a lot more from your horsepower.

---

**APACHE AND COMPETITOR COMPARISONS**

List price is based on a sprayer with fenders, premium leather seat, 100 foot boom, Viper® 4, AccuBoom®, UltraGlide® AutoBoom® and SmarTrax® AutoSteer. Please to the Ground™ HP per 1,000 lbs is calculated by: hp x efficiency ÷ weight x 1,000.

LIGHTER BY DESIGN

When it comes to big iron equipment, some think the heavier the better. At Apache, we strongly disagree. Apache Sprayers are lightweight by design, weighing 20,000 pounds on average. That’s about 10,000 pounds to 15,000 pounds less than comparable models.

So what are the advantages to owning a lighter self-propelled sprayer?

- **Less Soil Compaction.** The weight of large farm equipment can cause compaction to the root zone. Bottom line: heavier equipment means deeper, more harmful soil compaction.

- **Lower Operating Costs.** Heavier machines consume more fuel. Ever wondered what makes them heavier in the first place? Typically, it’s due to additional parts and components that you may someday have to replace.

- **A Smoother Ride.** The lightweight body, flex-frame construction and mechanical drive transmission of Apache Sprayers produce a smoother, more flexible and more powerful ride.

UNMATCHED TRACTION

Any self-propelled sprayer can navigate a flat, dry field — but that’s not the real world of farming. Compare how Apache performs in extreme conditions with any hydrostatic sprayer and you may be surprised at the advantages.

- **Smarter Weight Distribution.** Hydrostatic machines require 50/50 weight distribution. Without it, losing traction in one wheel will cause the machine to plow into the ground. With Apache mechanical-drive sprayers, 70 percent of the weight is centered over the rear axle, providing superior traction in any condition.

- **Superior Ground Contact.** Apache Sprayers feature flex-frame construction that ensures all four wheels are always on the ground. Lock-up torque converter and limited slip differential create constant contact with the ground rear wheels and keep them turning in all field conditions.

- **Patented Design.** The pivoting front axle design and oscillating joint provide superior traction and handling in tough, uneven field conditions.
SIMPLICITY BREEDS DEPENDABILITY

Ask our customers why they run with Apache and most times you’ll get a one-word answer: *simplicity*. Apache Sprayers are decidedly simple. Simple to run. Simple to adjust. Simple to maintain. That’s what makes owning an Apache the superior choice for the field.

HYDROSTATIC VS. MECHANICAL DRIVE

- The Apache mechanical drive transmission has fewer parts for reliability and easier maintenance.
- Hydrostatics have wheel motors on all four wheels — meaning more weight and working parts.
- The extra weight leads to the need for weight to be evenly distributed.
- Four-wheel traction control on hydrostatics often results in the machine stalling.
- Meanwhile, oil is being consumed by the spinning wheels that are trying to gain traction.

The difference is easy to see. Just a quick look under a John Deere® versus an Apache speaks for itself.

John Deere is a registered trademark of Deere & Company or its subsidiaries or divisions.
All specifications are subject to change without notice.

SIMPLE PARTS

Owning an Apache means big savings in the parts department. Apache Sprayers, in general, have less expensive parts compared to hydrostatic machines. All sprayers are designed with common components across multiple models. That means Apache owners don’t pay for us to manufacture, warehouse and ship lots of different parts for various sprayer models.

On average, competitor parts cost much more:
- Filters cost 59 percent more
- Flow meters cost 74 percent more
- Three-way nozzle bodies cost 31 percent more
- The average wheel motor on hydrostatic sprayers cost $4,500.

“We demoed multiple brands of machines and in the end we chose Apache because for the price you could not beat the machine. When there was a problem with hydrostatic drives, you almost had to take them to the dealer to have them repaired. They were almost impossible for just a shade tree mechanic to work on. It’s just a very simple machine and because of that, we have very few breakdowns.” — Matt Braun from Hobert, OK

See it in action:
apachesprayers.com/simplicity
THE PRICE OF DEPENDABILITY

Would you buy a sprayer if you knew 30 percent of the rated horsepower never got to the ground to move the machine? A heavier sprayer that was more apt to lose traction and get plugged in the mud? A sprayer that you knew was more difficult to maintain because of all the extra (not to mention more expensive) moving parts? A sprayer that’s only backed by a two-year warranty?

Or would you buy an Apache instead?

- **Maintenance.** Hydrostatic sprayers require more (and more complicated) parts, making them more difficult to maintain and service.
- **Weight.** Apache Sprayers with mechanical drive are 33-41 percent lighter than hydrostatic sprayers of comparable tank size, in addition to less weight than a tractor with a pull-type sprayer behind it. That means significantly better fuel efficiency and less compaction.
- **Traction.** With 70 percent of the weight on the rear drive axle, lock-up torque converter and limited slip differential, both rear wheels stay in contact with the ground and turn regardless of field conditions.
- **Warranty.** The best sprayer on the market is backed by the industry’s best warranty. Every Apache that rolls off the assembly line comes with a five-year limited warranty. Apache is the only manufacturer with full machine coverage for the first two years (<1,000 hrs).

**Cost.** Hydrostatic drives can cost almost $4,500 per wheel. That’s nearly $18,000 more for 30 percent less Power-to-the-Ground™ performance.

“...The spray system works great and the section shut off, once everything is set up, it does what it’s supposed to. And that’s peace of mind for us and we don’t have to worry about that. The maintenance on these machines is very minimal other than greasing and oil changes. In the wet years, it’s taken some punishment and it held up for us. That’s why there’s another one in the yard.”

- Kevin Zepick from Kipling, SK, Canada

---

1. The spray system works great and the section shut off, once everything is set up, it does what it’s supposed to. And that’s peace of mind for us and we don’t have to worry about that. The maintenance on these machines is very minimal other than greasing and oil changes. In the wet years, it’s taken some punishment and it held up for us. That’s why there’s another one in the yard.”

- Kevin Zepick from Kipling, SK, Canada
MORE HORSEPOWER WHERE AND WHEN IT COUNTS

Horsepower rating is important — but only when it’s powering your machine forward. Apache Sprayers are mechanical drive with patented Power-to-the-Ground™ technology, which means more horsepower where and when you need it most.

MECHANICAL DRIVE VS. HYDROSTATIC

Hydrostatic sprayers eat up a ton of horsepower to run a hydraulic pump in order to send oil down to the wheels. About 90 percent of the horsepower generated by Apache Sprayers is sent directly to the wheels, versus 70 percent with a hydrostatic machine.

WEIGHT DIFFERENCE IS BIG

The heavier the sprayer, the more horsepower is required to move that machine and its chemical product load. Lighter sprayers like the Apache get the same job done — while using less horsepower and fuel — and create less soil compaction for increased yields.

THE ENGINE

Cummins Tier 4 Final engines get more done while costing you less to operate. Therefore, already fuel-efficient Apaches become even greater energy misers in 2018 — cutting fuel consumption 15-21 percent across all models.

“I was surprised with the resale value. It was almost as much as we paid for the thing new, so I can’t complain about that. When it came time to trade up sprayers we didn’t look anywhere else but Apache.” — Chris Kimerer from Britton, MI
I traded to an Apache about 6 years ago and this is my second Apache... At the price point now, I wouldn’t be without it. I was just at a meeting talking to another farmer and he was running 3,000 or 4,000 acres and I said, you know you really should put the numbers together because you would be amazed at what you’d save. And the fuel economy is amazing.” – Garnet Berg from Dawson Creek, SK, Canada

LOWEST COST OF OWNERSHIP IN THE INDUSTRY

So how does a machine earn the reputation as being the most affordable self-propelled sprayer on the planet?

Retail. Apache Sprayers retail for $68,000 to $120,000 less than other self-propelled sprayers.

Resale. Apache Sprayers retain an average of 72 percent of their value after five years, which is why 1088 series sprayers have earned the Highest Retained Value Award from EquipmentWatch™ two years running.

Warranty. Industry-leading two-year bumper-to-bumper and five-year limited warranty means Apache owners pay less out of pocket for unexpected repairs.

Simplicity. The simplicity of Apache mechanical drives reduces overall service and operating costs compared to hydrostatic sprayers, which have wheel motors that can cost almost $4,500 per wheel to replace.

Parts. Common components used across Apache models results in lower cost replacement parts — including filters that are 56 percent less, flow meters that are 74 percent less and three-way nozzle bodies that are 31 percent less than competitive sprayers on average.

Lower Fuel Costs. Apache Sprayers are 33-41 percent lighter than hydrostatic sprayers of comparable tank size. This yields a huge savings in fuel costs for Apache owners.

NEW FOR 2018: GRAYHILL CAN-BUS DISPLAY

KEY BENEFITS

- The bright, backlit display provides high contrast text and full color graphics for excellent sunlight readability.
- Includes real-time virtual gauges, diagnostic monitors, fault indicators and service reminders.
- Intuitive and responsive touch technology recognizes bare and gloved fingers, even when the display surface is wet.
- Scratch resistant and anti-glare cover glass is optically bonded to LCD display for superior performance.
- Simple, flush-mounted installation options seamlessly blend within the cab design.

“It’s not often customers call you just to say how much they like a display, but that’s been the response to the new Grayhill. It’s as good as advertised, if not better.”

- John Casebolt
Senior Application Specialist, ET Ag Service

The Quietest Cab.
Noise is reduced through the cab being positioned away from the engine and transmission, advanced sound-dampening floor mats and liner, and a bellowed exhaust tube minimizing vibration.

Smooth Ride.
The frame construction and adjustable ergonomic seat absorb shocks providing a smooth ride at all times. There’s room for a second person in the buddy seat, which doubles as a portable cooler.

Full View.
A 360 degree view is made possible by more than 66 square feet of glass. A rearview camera and in-cab display help reduce operator fatigue.

Easy Listening:
Enjoy Bluetooth®-ready Polk® audio system, with SiriusXM® satellite radio. Enjoy crystal-clear sound from four Jensen® HP speakers.

Full Control:
An intuitive control console places precision tools and the field computer of your choice within easy reach. The ET Pilot System® includes a joystick with “Braille” functionality, allowing operators to control an Apache by feel.

ADDITIONAL FEATURES

- Seven-inch touchscreen display
- “Plug and Play” ISOBUS technology
- Two-cruise control settings
- Superior machine diagnostics and event logging
- USB jack
- Electronically calibrated optional adjustable-on-the-go axles
- Three-speed windshield wipers
- Foot throttle with deceleration setting

CAB MEETS MAN CAVE

Smartly designed with the operator in mind, the Apache cab offers premium comfort, better ergonomics and an intuitive control console that puts operators in full-command. It’s like a man cave in the field.

A 360-degree view is made possible by more than 66 square feet of glass. A rearview camera and in-cab display help reduce operator fatigue.

It’s not often customers call you just to say how much they like a display, but that’s been the response to the new Grayhill. It’s as good as advertised, if not better.”

- John Casebolt
Senior Application Specialist, ET Ag Service
The Raven Hawkeye® application system is available as a factory-installed option on all Apache models. Hawkeye takes precision to the next level, allowing operators to determine application rates down to individual spray nozzles. It allows you to vary spray pressure independent of speed and rate. Hawkeye is built on the ISOBUS communication platform.

**THE HAWKEYE ADVANTAGE**
- Precise application rate in a variety of conditions
- Ability to manage drift and off-target applications
- Accurate droplet size and placement
- Nozzle-by-nozzle turn compensation standard
- Extended range out of each nozzle
- Blended pulse application
- Fully integrated with machine application control systems
- Simple and clean installation, setup, and calibration
- Individual valve diagnostics monitor every nozzle to alert you immediately of a system issue
- Mapping and data logging of each nozzle for more accurate record-keeping
- Adjustable pressure on the fly including two preset pressures

Hawkeye is compatible with the following displays:
- Raven Viper® 4
- John Deere
- GroundStar™ 2630

**RAVEN SIDEKICK PRO™**

**KEY BENEFITS**
- No pre-mixing, tank mixing, cross contamination or clean out reduces waste from unused product.
- Powerful positive displacement pump performs chemical injection on the pressure side, closer to the boom, for faster response time.
- Flexibility with multiple chemical applications.
- Reduced chemical exposure means additional safety for operator.
- Adjust chemical concentration on the fly rather than spraying more or less of the entire mix.
- Automatically flush Sidekick Pro pump with Rinse Assist for increased reliability and fewer service issues.

**Raven Viper® 4**

**Raven Sidekick Pro™**

We are the only company to factory install:
EASILY ACCESSIBLE TANK REFILLS

The Apache Sprayer’s fill station is in one location, and close to the cab entry, allowing you to fill both the product tank and standard 100-gallon rinse tank in minutes.

OUR WET SYSTEM REDUCES DOWNTIME

To keep the nozzle tips from becoming blocked, each boom section has a 1-inch strainer with a 50-mesh screen, and a 2-inch full-port Banjo® main product strainer with a 50-mesh screen.

An optional fill station monitor easily counts gallons added into the tank on a digital screen readout.

WET SYSTEM FEATURES

- Hand rinse valve
- LED lights for night work
- Product pump on/off
- Agitation increase/decrease
- Remote battery connections
- Agitation and roto-flush valve
- Product tank 2-inch fill valve (optional 3-inch valve)
- Product tank/rinse tank valve
- Optional fill station monitor — now with a larger 7-inch screen
- Optional Cleanload™ eductor

PRECISION OPTIONS

AUTOMATIC SECTION SHUT-OFF
- Standard with 2018 factory-install of Raven field computer
- Auto shut-off of booms helps avoid spraying in no-spray zones
- Set overlap of spray product from pass to pass
- Reduces input costs
- Reduces operator stress and fatigue
- Allows for faster speeds in rows and turns

AUTO STEERING
- Creates precise lines in rows automatically
- Reduces time and input costs
- Travel at faster speeds in rows and turns
- Less crop damage
- Reduces operator stress and fatigue

BOOM HEIGHT LEVELING
- Automatically controls height of boom above ground
- User-friendly controls with instant power-on
- Greater boom stability decreases wear and tear on boom
- Faster and more even application speeds
- Even application
- Smoother ride and lower service costs
A BOOM PACKAGE THAT PACKS A PUNCH

Apache offers a stronger, more flexible, better protected and lower maintenance boom package. Better cushioning on the boom rack minimizes wear and tear. Boom wings break away when coming into contact with trees and other immovable objects, and spring back into place when the obstacle is passed. A common boom manifold allows for upgrades and boom extension.

FENCE ROW NOZZLES

Fence row nozzles available on one side or both.

F5-section boom available in lieu of standard. Nozzle spacings available on 5-section booms.

“FLEX-FRAME” SMOOTH RIDE

Flex-frame consists of C-channel flex-frame rail and a pivoting front axle.
- The frame flexes as you turn or drive over uneven ground
- All wheels stay on the ground at all times
- Reduced wear on accumulators and shocks

Design is like a tri-axle dump truck frame constantly flexing and twisting. The flex-frame means:
- Less stress on machine and operator
- Less maintenance and downtime
- Increased durability for a longer machine life

PATENTED SUSPENSION SYSTEM

- Rear suspension equipped with auto-leveling
- Anti-sway hydraulics
- Fitted with nine nitrogen accumulators to eliminate bounce back effect
- Increased speed and stability in the turns
- Rear-straddle mount axle improves gear shifting and contributes to a more stable ride

CUSTOMIZATION THAT WORKS

We care about your success. Your needs as an applicator may be exclusive to your farm, and that’s why we offer so many customizable options to get application done your way.

- CUSTOM TOOLS
- CUSTOMIZED FUNCTIONALITY
- CUSTOM SIZED MATERIALS

Power Mirrors
Premium Seat
Stainless Steel Product Tank
Hypro® Cleanload Chemical Eductor
Fence Row Nozzles
Stainless Steel Fenders
Every tire used by Apache is inspected upon assembly to ensure that farmers enjoy a long service life. We look for excellent traction and lateral stability with robust crowns and deep tread bars to coincide with our unmatched traction expectations.

**TIRE OPTIONS**

Michelin® Agriculture Tires come standard on all Apache Sprayers. We also offer alternative options for narrow, duals, and floats.

**THE BRIGHTEST LIGHTING PACKAGE**

Our LED lighting package produces more light than previous Apache models while consuming less energy. Premium LEDs produce white light that reduces eye fatigue and operator stress. Rugged design withstands heavy vibration, corrosion, moisture, and dust.

Optional lighting package comes with:
- 12 aluminum housings
- 64 LED bulbs
- Estimated bulb lifetime of 12,000 hours
- Combination of long-and mid-range lenses for superior visibility
- LED hazard, brake and turn signals for night driving (standard)

“...it's no different than the day time. Really, I mean you can just go right on and keep right on spraying.” – Leon Green from Caneyville, KY

At Equipment Technologies, technology is a big part of our lives — heck, it’s in our name. One look at our advanced sprayer designs would tell you that, but right now we want to brag on something else — our social media. We want you to visit and connect with each of our social channels to stay up-to-date on our latest product innovations, news, special offers and giveaways.
