

# MODEL YEAR 2020 ENHANCEMENTS

## PRODUCT

### ■ AS840 Apache Sprayer

You ask — we deliver. Meet the new Apache AS840 with an hefty 800-gallon tank as a result of direct requests from customers in the field.

### ■ Stainless Steel Tank & Mount Design (optional)

Ready to go big or go home? Upgrade from the standard plastic-poly tank to our all-new stainless-steel tank and mount design option. But it's not just for looks, operators will notice a faster clean out.

### ■ Front Fill Access (optional)

Our front fill access makes it easier than ever to align with a nurse truck for a product fill (and there's no need to fold the booms to get there). Just park, fill and go.

# CUTTING-EDGE PRECISION TECHNOLOGY

## ■ AutoBoom® XRT (optional)

Raven Applied Technology has taken boom control to another level with the AutoBoom XRT using industry-leading radar sensors to detect and maintain optimal spray height for maximum product efficiency. Pressure-based control allows for smooth movement and quicker reaction time to give operators complete control and better application coverage.

## ■ Autofold (only available with AutoBoom XRT)

The previous “push-and-hold,” then wait for one section to unfold one-at-a-time is a thing of the past. All three sections of the boom can now fold at once, automatically, with one push of a button.

## ■ Double-Stacked Nozzles for Hawkeye (optional)

One is good, two is better. Reach further than ever before to increase your application capabilities.

## ■ Quick Spray Mode

It's just like it sounds. Using the quick spray mode function operators can set up spraying options from the machine display. This feature is great for small fields and/or simple spray jobs — just hop in the cab, turn the key and start spraying.
