

LOWEST COST OF OWNERSHIP IN THE INDUSTRY

Lower cost of ownership starts with smart engineering. Apache Sprayers are designed with common components across multiple models. That means Apache owners don't pay for us to manufacture, warehouse and ship lots of different parts for various sprayer models. We've also avoided adding excess weight to the machines — weight that costs extra money and causes yield-robbing compaction in the field.

Still not convinced? Consider this:

- Apache Sprayers purchase price compared to competitive sprayers is an average of **\$30,000 to \$85,000 less**.
- All sprayers are designed with **common components** across multiple models. That means Apache owners don't pay for us to manufacture, warehouse and ship lots of different parts for various sprayer models.
- Industry-leading **two-year bumper-to-bumper and five-year limited warranty** means Apache owners pay less out of pocket for unexpected repairs.
- Lower cost replacement parts; including filters that are **55% less**, flow meters that are **74% less** and three-way nozzle bodies that are **31% less** on average.
- Apache Sprayers are lightweight and agile by design, weighing 20,000 pounds on average - about **10,000-15,000 pounds less** than comparable models - reducing the compaction on your soil and reducing fuel costs.
- State of the art precision farming options, such as Raven Advanced RS1™ Steering System and Hawkeye®, allow you to **spray smarter** and **maximize your investment** on inputs.
- Apache Sprayers have the **highest resale value** in the industry, retaining an average of **72%** of their value after five years.

"I think the retained value just goes to show how well these machines can hold up and how long they'll last. I've kept track of how much my machine is worth today, and actually, I could sell it for about \$20,000 more than what I bought it for three years ago."
